Gas Plant

This year we are setting goals to move us ahead to 2012.

By January 2010:

- develop one site specific EARTH 1st Goal
- schedule and run EARTH 1st Committees as part of operations

By December 2010:

- review, update or develop standard operating procedures to protect the environment
- identify stationary equipment (fans, pumps, motors, air treatment and water treatment equipment) that requires preventative maintenance to protect the environment and
- develop appropriate Preventative Maintenance programs for that equipment

By 2012:

- calculate the carbon footprint of the Walker group of companies and set goals for reduction

Knowing our Carbon Footprint and taking steps to reduce it, is not only good for the environment (reducing greenhouse gases), it is good for our bottom line.

In this new carbon economy, verifiable reductions in greenhouse gases provides a business opportunity.

In order to move us ahead to 2012, a Carbon Action Team (CAT) has been put together. They will be keeping you all up to date in the EARTH 1st newsletter's new carbon corner.

What is your environmental goal for 2010?

How are you reducing your greenhouse gas emission?

Some ideas to get you thinking:

- fill your dish washer and washing machine with a full load - this will save you water, electricity, and washing powder
- fill the kettle with only as much water as you need
- do your weekly shopping in a single trip
- hang out the wash to dry rather than tumble drying it
- carpool to work (for short journeys either walk or cycle)
- use tap water not bottled

QUESTIONS/DISCUSSIONS

1. What is your site specific goal for 2010?
2. When will your EARTH 1st committee meetings take place?
3. How will you review and update your Operating Procedures?
4. How will you identify and develop PM programs for your non-mobile equipment?
5. What assistance and tools will you need to meet these goals?

If you don't know where you are going, you might wind up someplace else.
