

Environmental Challenges

All of our operations at Walker Industries have the potential to face environmental challenges. There are all sorts of opportunities to protect ourselves from these challenges. Training employees to look for new ways of doing things to better support the environment is key. A knowledgeable, motivated team generating new ideas creates new opportunities to overcome environmental challenges before we are faced with them.

Environmental challenges come in all forms:

- Changing Legislation
- Failure of Equipment
- Severe Weather
- Wasted Energy
- Wasted Water
- Wasted Resources
- Public Concerns
- The Cost of Waste Disposal

Steps we can take to protect ourselves:

Training employees to:

- acknowledge they are part of the environment
- look for new ways of doing things to support the environment
- create new ideas and new opportunities
- understand their role
- make decisions for the environment
- know how to react if things go wrong

Audit operations to operate efficiently by:

- taking preventive action
- designing for the environment
- using less energy
- using fewer resources
- creating less waste

Take time to plan:

- Anticipate what could challenge us and take action to address the challenge before it happens
- Build harmonious relations with our neighbours and stakeholders
- Look at all aspects of a project and plan with that in mind

Strive FOR Wise

DID YOU KNOW?

- Thinking prevention means knowing our operations, regularly assessing them and taking action to more efficiently operate. We will face fewer environmental challenges if we design our operations for the environment and look for ways to create less waste and use less energy, water and resources.
